

Cafe Billing Management System

Order management, GST calculation, invoice generation and sales tracking.

Project Overview

The Cafe Billing Management System is a business application for cafes and small food businesses. It helps manage menu items, customer orders, GST calculation, invoices and sales reports.

The Problem

Manual billing by hand can slow service, create tax calculation errors and make sales tracking difficult for small food businesses.

The Solution

A digital billing solution that automates order processing, tax calculation, invoice generation and business reporting through a simple admin dashboard.

Key Features

- Menu Management — add and update cafe menu items
- Order Management — handle customer orders efficiently
- GST Calculation — automatic tax calculation
- Invoice Generation — clean customer invoices
- Sales Tracking — view business performance
- Admin Dashboard — control menu, orders and reports

Technology Stack

Frontend: HTML, CSS, JavaScript | Backend: Spring Boot | Database: MySQL
