

Leave Approval Management System

Multi-level leave approval workflow for students, teachers, HOD and director.

Project Overview

A centralized web platform for colleges to manage student leave requests, built for students and college authorities who need a clearer, faster approval process.

The Problem

Manual leave approval processes are slow and difficult to track — students must follow up with multiple people, and there is no single place to view pending or completed approvals.

The Solution

An automated workflow with role-based access where leave requests move from student submission to teacher approval, HOD approval and director approval, with status tracking at every step.

Key Features

- Student Login — submit and track leave applications
- Teacher Approval — review and forward requests
- HOD Approval — department-level approval control
- Director Approval — final approval stage
- Status Tracking — clear pending, approved and rejected states
- Role-Based Access — different screens for each user role

Technology Stack

Frontend: HTML, CSS, JavaScript | Backend: Spring Boot | Database: MySQL
